SKILLS

TECHNICAL SKILLS

- **Data Engineering & Architecture:** Relational DB Design, Schema Architecture, ETL/ELT Pipeline Optimization, Data Migration & Validation.
- **Data Analytics & Modeling:** Statistical Data Analysis, Predictive Modeling, Exploratory Data Analysis (EDA), Data Cleansing.
- **Languages & Scripting:** SQL, Python, Java, C#, Node.js, JavaScript.
- **Databases & Tools:** MySQL Workbench, Git/GitHub, REST APIs, Bash, Vercel.

PROJECTS

Four-in-One Vital Sign Sensor Kiosk with AI & IoT (Thesis) | 2025 – 2026

- **Database & AI Deployment:** Designed and optimized the backend relational database architecture to securely store and process real-time telemetry data streams from 4 embedded sensors, ensuring minimal data latency during peak application usage.
- **Data Science / Modeling:** Integrated, trained, and deployed predictive AI algorithms specialized in medical anomaly detection and complex health risk data analysis.
- **Data Flow Architecture:** Authored end-to-end software flowcharts and data pipeline architectures to ensure flawless data communication between hardware edge nodes and the centralized web application interface.

CERTIFICATIONS

Associate Data Engineer in SQL (Data Camp)

- **Database Architecture & Warehousing:** Mastered relational database design, data warehousing concepts, and cloud-based systems using Snowflake SQL and PostgreSQL to engineer scalable data infrastructures.
- **Advanced Querying & Analytics:** Gained deep proficiency in multi-table joins, intermediate transformations, and visualization pipelines, validated through a data management theory assessment and capstone projects on student mental health and London transit networks.

Data Fundamentals in IBM SkillBuild partnership with TESDA

- **Data Lifecycle & Frameworks:** Mastered foundational data science methodologies, core analytics concepts, and enterprise data governance trends shaping the modern global data landscape.
- **IBM Watson Studio Proficiency:** Gained hands-on experience utilizing IBM Watson Studio tools and languages to efficiently clean, refine, and transform raw datasets into structured visual dashboards.

Python Essential 1 in Cisco

- **Core Logic & Flow Control:** Mastered fundamental Python programming mechanics, including data types, variables, input/output operations, and complex conditional execution using loops and Boolean logic.
- **Data Manipulation & Automation:** Developed proficiency in utilizing advanced data structures like lists, tuples, and dictionaries alongside functional programming and exception handling to automate data routines.

WORK EXPERIENCE

STAFF DOMAIN PH – IT Operations & QA Intern | January 2026 – June 2026

- **Data Migration & Validation:** Spearheaded the technical transition of company tracking logs from legacy Excel frameworks into a centralized database system, significantly improving data transparency, sanitization, and structured validation.
- **Process Automation:** Leveraged PowerShell and Command Prompt scripting to build automated data routines and environment configurations, accelerating remote diagnostics.
- **System QA & Analytics:** Conducted functional QA testing and issue tracking for a centralized IT Management System (ITMS) managing 5,000+ assets, validating data accuracy and system behavior alongside core engineering teams.

EDUCATION

BACHELOR OF SCIENCE IN COMPUTER ENGINEERING

JULY 2026

- Rizal Technological University
